PROJECTS

- [Task Distribution System](#)

It is a personal project to manage multiple systems through a master system and execute the given task on the available system node and provide the result back to the user. ([more...](#))

- [GitHub Repo Visualization](#)

It is a personal project to scrap data of public repositories using Github API and use that data to create a visualization about number of repositories and their used languages. ([more...](#))

- [XMLJSON](#)

xmljson is an open source project which converts XML into Python dictionary structures (trees, like in JSON) and vice-versa. ([more...](#))

- **Visual Mailers**

It is a professional project to create visual mailers using public and private domain data. I am using **d3.js** and **Python** language to create this tool.
