## CAREER VISION

---

I intend to work in an established organization, where I can get new challenges to work upon and an excellent exposure to use my knowledge, skills and creativity to deliver my best in regard to all duties that I am entrusted with.

## RELEVANT EXPERIENCE

---

**Gramener, Bangalore** **Dec 2015 - Present**  
**Data Specialist**

• Currently I am working in **Data Science Domain** at **Gramener, Bangalore**. Data Science is a field which mainly deals with data, look into data and predict a structure behind of it. My core role in the organization is to collect data, reshape it according to the need and requirements and provide solutions to client requirements in scope of data with the help of visualization. I mainly work upon Python, Javascript to make these visualization and handling data at backend.

**In Time Tec, Jaipur** **Apr 2014 - Nov 2015**  
**Software Engineer**

• I was working in **Web Development Domain** at **In Time Tec, Jaipur**. I used to build web applications for clients. My core responsibility was to understand the requirements and proceed according to them. I also used to build the design and structure of application according to client needs. I used to follow the **Agile Development Development** working on to projects. We usually manage project scope & tasks using **Scrum Methodology**.

## TECHNICAL SKILLS

---

- **Languages:**

Python 2.7		Data Visualization (D3.js)		Core PHP		Javascript

<b>10<sup>th</sup> Class (Rajasthan Board – 79.67%)</b>	
MHS, Jaipur	Jul 2005 – Jul 2006

PROJECTS

---

- Task Distribution System (Self Project)**
- Task Distribution System manages the tasks given by client to nodes (computer systems) to execute. It is mainly a task distributor which works to distribute the task based on the availability of nodes to execute and return the response back to client. I am making this project in Python language using all OOPS Concepts. It resides on github also and accessible using <https://github.com/mukultaneja/TaskDistributionSystem>
- CradlePoint ECM:**
- It is a B2C Product which focuses upon Router management for its client and build using Python.
- Approval Module:**
- It is B2B Product which can be used in large organization to quotes & manages purchase orders.
- Vacuum Cleaner Stores :**
- It is a live website <http://vacuumcleanerstores.com/> which is for SEBO, America to give its Dealers a online space to describe their products to their customers.
